

Chemguide – questions

STRONG AND WEAK ACIDS

1. Use hydrochloric acid and ethanoic acid, CH_3COOH , to help you to explain what is meant by a strong acid and a weak acid.
2.
 - a) Define pH.
 - b) Work out the pHs of the following solutions of strong acids
 - (i) $0.200 \text{ mol dm}^{-3}$ hydrochloric acid
 - (ii) $0.0100 \text{ mol dm}^{-3}$ nitric acid
 - (iii) 1.00 mol dm^{-3} hydrochloric acid
3.
 - a) Write an equation showing the equilibrium which occurs when ethanoic acid dissolves in water.
 - b) Write an expression for K_a for ethanoic acid.
 - c) Define $\text{p}K_a$.
 - d) The value for K_a for ethanoic acid is $1.74 \times 10^{-5} \text{ mol dm}^{-3}$ (to 3 significant figures). What is the value of $\text{p}K_a$?
 - e) Two acids have the following values for K_a :
acid A: $6.32 \times 10^{-5} \text{ mol dm}^{-3}$
acid B: $1.50 \times 10^{-4} \text{ mol dm}^{-3}$

Which is the stronger acid?

- f) Two different acids have the following values for $\text{p}K_a$:

acid C: 3.24
acid D: 5.66

Which is the stronger acid?
